

Robert Price

Project: Robert Price
Contractor: Walmsley Shaw
Materials Used: Ronadeck Fast Grip Standard

Robert Price is one of the largest regional Builders Merchants in the UK. Every day their forklift trucks manoeuvre timber in and out of a treatment facility. This constant activity, abrasion, occasional impact plus chemical attack to the concrete caused the surface driven on by the fork trucks to deteriorate.

Keen to maintain their good safety and productivity records, Robert Price could not afford for the damaged surface to affect the way they worked, or put health and safety at risk. So a quick durable solution was needed to resurface their now very slippery concrete floor.

Walmsley Shaw Ltd, specialist flooring and slip-resistant coatings contractors, conducted a site survey and liaised with the forklift manufacturer to check tyre wear, rate and surface suitability. With Ronacrete they investigated the required chemical resistance and performance requirements and Ronadeck Fast Grip slip resistant surface was recommended.

Ronadeck Fast Grip was laid in two long parallel strips which would be driven on by the fork trucks. The Ronadeck Fast Grip provided an excellent slip resistant surface with safe positive traction for the trucks. Its hard, exposed aggregate finish and special seal coats is able to tolerate constant vehicle traffic. Use of the best aggregate size and type minimised the tyre wear and tear whilst providing grip. During installation, damp conditions presented no problem for installation of the Ronadeck Fast Grip surface as it can be applied to damp surfaces. The finished surface is very capable of resisting chemicals used in the Robert Price treatment process.

Ian Harper, Facilities Manager for Robert Price said "Ronadeck Fast Grip is an excellent surface. We were impressed with the whole process, from survey to recommendation and flexible installation times. We are delighted with the performance of the surface and with Walmsley Shaw"
